

Things Learnt

1. Using an average of 86kph in the itinerary was a little optimistic, but as long as an ETA of no later than 5:00 in summer (but preferably 4:30) is used, this average speed is acceptable.
[That is, times the distance by 0.7]
2. On twisty roads, a distance of less than 570km is recommended.
3. Better water-proofing is required.
4. Book earlier to reduce costs.
